MONUMENT RECORD SURVEY PUBLIC LAND U.S.

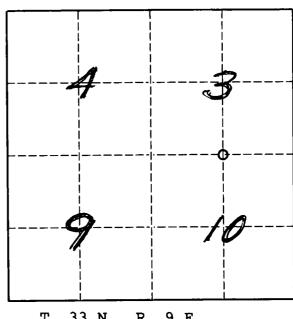

INSTRUCTIONS:

This record shall show the location of the corner and shall include all of the following nine elements (a through i).

Identify the corner by (a) reference to the U.S. public land survey system.

O = Corner monument restored.

South Quarter corner of Section 3, Township 33 North, Range 9 East, Langlade County, Wisconsin.

T. 33 N., R. 9 E.

6" maple

Berntsen SN-1

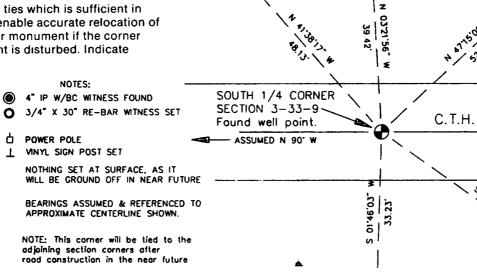

6" spruce with ne "No Tresspassing"

Describe any record evidence, monument evidence, occupational evidence, testimonial evidence or any other material evidence you considered, and whether the monument was found or placed.

The original corner was established in 1860 by H.C. Fellows. Original BT's: birch, 8", N20°W, 11 lks., birch, 8", S30°W, 20 lks. In 1921, Malcolm Hutchinson found "stake by Dorr one orig BT" and marked two new BT's: birch, 10", N22°W, 49 1/4 lks., and a birch, 14", S50°W, 84 lks. 1930's resurvey either found corner or established it and set 4" iron pipe with brass cap witness 33' south, but I have no notes to know what was found or set for the actual corner. In 1979, Ray Hallisy found and made witness's to the 1930's witness monument. 1983, Glen Barker, CPI found iron in road for corner and witness monument. 06/07/96 D. Tlusty found 1 1/4" well point, 13" in road. Hutchinson used well points but didn't mentioned setting one here. (continued on reverse)

In the plan view drawing below, provide reference ties to at least 4 witness monuments, or, if the location is within a municipality, to at least 2 witness monuments. (Witness monuments shall be made of concrete, natural stone, iron or other equally durable material.) FB7-15 Describe witness monuments.

Show a plan view drawing depicting (d) the relevant monuments and reference ties which is sufficient in detail to enable accurate relocation of the corner monument if the corner monument is disturbed. Indicate north.

Describe any material discrepancy between the location of the corner as restored or reestablished and the location of that corner as previously restored or reestablished by distance and direction. Show the discrepancy on the plan view drawing under (d), above. Show the distances between the corner as previously restored or reestablished and (1) the corner as restored or reestablished, and (2) to at least 2 of the witness monuments shown on the drawing in (d), above.

DISCREPANCY

Was the corner restored through acceptance of (1) an obliterated evidence location, or, (2) a found perpetuated location.?

A FOUND PERPETUATED LOCATION.

Was the corner reestablished through lost corner proportionate methods? If so, show the method, including the directions and distances to other public land survey corners used as evidence or used for proportioning in determining the corner location.

(continued from front side)

Hutchinson's distances of 39.78 to the east and 39.61 to the west compare very good to the 1930's resurvey distances of 39.85 east and I accept the location of the well point found as the best 39.62 west. evidence of the original corner location and perpetuate said location as shown of the front side of this form.

(type or print name)
certify that the corner location shown on this record was determined by me or under

my direction and control and that this U.S. Public Land Survey Monument Record is correct and complete to the best of my knowledge and belief.

Affix Land Surveyor Seal
