

# Mapping Affidavit

This document has been created for the sake of making people aware of the fact that the 1936 re-survey map of Township 34 North, Range 9 West, and its transcribed field notes are in error regarding the location of the quarter corner between Sections 19 & 30.

Page 2 attached is a partial copy of the 1936 survey map of that township. Said map is filed in the County Surveyor records as Map # 40443.

Page 3 attached is a copy of a page of the transcribed field notes of a 1936 survey in T34N, R9E, as performed by T. H. Kilroe and D. A. Hintz.

Note that both Pages 2 & 3 indicate that the quarter corner between Sections 19 & 30 was set at a distance of 42.18 chains from the corner of Sections 19, 20, 29 and 30, and on a straight line between the adjoining section corners.

Page 4 attached is a page from the original field notes of Kilroe and Hintz. These notes are for the East half of the line between Sections 19 & 30. On these notes, in black ink, is the distance of 2782.4 feet which corresponds to the above mentioned map and transcribed field notes. However, also note that in red pencil is a "NG" note near the "¼ cor." As per the website, Abbreviations.com, the governmental use of "NG" is taken to mean "no good". Kilrow and/or Hintz noted their first corner established by proportionate measure was "no good" and found "org. ¼ cor". at a distance of 2528.1 feet from the east. I measure that line as 2526.4 feet, very much in agreement with the red notes on the Kilroe and Hintz field notes.

Conclusion: It appears that the map and transcribed field notes were created before a final search for, and location of, the original quarter corner. I make this record for the sole purpose of making others aware of the map and transcribed field note errors.
